

this species or its hybrids (*C. reticulata* [Blanco]); and grapefruit (*C. paradisi* [MacFad.]) may be imported from the Riverland, Riverina, and Sunraysia districts without treatment for fruit flies, subject to paragraph (c) of this section and all other applicable requirements of this subpart.

(c) If surveys conducted in accordance with §319.56-2d(f) detect, in a district listed in paragraph (a) of this section, the Mediterranean fruit fly (*Ceratitis capitata* [Wiedemann]), the Queensland fruit fly (*Dacus tryoni* [Frogg]), or other fruit flies that attack citrus and for which a treatment is listed in the Plant Protection and Quarantine (PPQ) Treatment Manual, citrus fruit from that district will remain eligible for importation into the United States in accordance with §319.56-2(e)(2), provided the fruit undergoes cold treatment in accordance with the PPQ Treatment Manual, which is incorporated by reference at §300.1 of this chapter, and provided the fruit meets all other applicable requirements of this subpart. Entry is limited to ports listed in §319.56-2d(b)(1) of this subpart if the treatment is to be completed in the United States. Entry may be through any port if the treatment has been completed in Australia or in transit to the United States. If no approved treatment for the detected fruit fly appears in the PPQ Treatment Manual, importation of citrus from the affected district or districts is prohibited.

§319.56-2w Administrative instruction; conditions governing the entry of papayas from Costa Rica.

The Solo type of papaya may be imported into the continental United States, Alaska, Puerto Rico, and the U.S. Virgin Islands from the provinces of Guanacaste, San Jose, and Puntarenas, Costa Rica, only under the following conditions:

(a) The papayas were grown and packed for shipment to the United States in the provinces of Guanacaste, San Jose, and Puntarenas, Costa Rica.

(b) Beginning at least 30 days before harvest began and continuing through the completion of harvest, all trees in the field where the papayas were grown

were kept free of papayas that were $\frac{1}{2}$ or more ripe (more than $\frac{1}{4}$ of the shell surface yellow), and all culled and fallen fruits were removed from the field at least twice a week.

(c) When packed, the papayas were less than $\frac{1}{2}$ ripe (the shell surface was no more than $\frac{1}{4}$ yellow, surrounded by light green), and appeared to be free of all injurious insect pests.

(d) The papayas were packed in an enclosed container or under cover so as to prevent access by fruit flies and other injurious insect pests, and were not packed with any other fruit, including papayas not qualified for importation into the United States.

(e) All activities described in paragraphs (a) through (d) of this section were carried out under the general supervision and direction of plant health officials of the national Ministry of Agriculture.

(f) Beginning at least 1 year before harvest begins and continuing through the completion of harvest, fruit fly traps were maintained in the field where the papayas were grown. The traps were placed at a rate of 1 trap per hectare and were checked for fruit flies at least once weekly by plant health officials of the national Ministry of Agriculture. Fifty percent of the traps were of the McPhail type, and fifty percent of the traps were of the Jackson type. The national Ministry of Agriculture kept records of fruit fly finds for each trap, updated the records each time the traps were checked, and made the records available to APHIS inspectors upon request. The records were maintained for at least 1 year.

(g) All shipments must be accompanied by a phytosanitary certificate issued by the national Ministry of Agriculture stating that the papayas were grown, packed, and shipped in accordance with the provisions of this section.
